Recife/PE - Brazil

< PROFILE />

Dedicated Software Engineer with over four years of expertise in backend development, specializing in the design, deployment and maintenance of scalable APIs using mainly Python. Experienced in working with distributed and cloud environments, I'm committed to delivering high-quality solutions. Thriving in collaborative and dynamic team settings, I am passionate about contributing innovative ideas to shape next-generation technologies.

< WORK EXPERIENCE />

Senior Software Engineer

FCxLabs | Apr 2024 - Present

- Developed a high-traffic, data-intensive shipping cost API (Python – FastAPI) for e-commerce transactions (over 600 requests per second), implementing caching strategies (Redis) to significantly enhance performance.
- Spearheaded the expansion of a secondary API (Python – FastAPI) enabling product sales on external marketplaces, achieving a 75% reduction in response time compared to the legacy application (P95 reduced from ~600ms to ~150ms, validated with Grafana K6 stress testing).
- Designed and developed an event-driven API (Python – FastAPI, FastStream, RabbitMQ) to centralize product data management (inventory, pricing, media, etc.), meeting strict low-latency and high-throughput requirements.
- Led the development and maintained a data quality alerting pipeline (Dagster), addressing observability gaps caused by failures or delays in synchronization across distributed databases (Qlik).
- Worked extensively with AWS (S3, EC2, RDS, CodeCommit, etc.) and integrated it with Dynatrace to enhance observability and dashboard analytics.
- Served as technical lead for a team of four junior/mid-level developers, providing mentorship and guidance.

Software Engineer

Allugg | Apr 2023 - Apr 2024

- Engineered a feature-rich web application (Python - Django), delivering a scalable and resilient e-commerce-style platform tailored to complex business requirements.
- Spearheaded system integration initiatives with multiple key third-party software solutions (CRM platforms such as Monday, HubSpot, Nectar, and DeskManager), ensuring seamless data flow and enhanced operational efficiency.
- Successfully implemented Domain-Driven Design (DDD) to architect a flexible and business-aligned software solution, facilitating easier adaptation to evolving business needs.
- Developed and executed rigorous unit testing protocols, ensuring high code quality, system reliability, and minimizing time-to-market through early detection of potential issues.
- Recognized for commitment to project delivery, critical thinking, and proactive knowledge-sharing within the team.

Software Engineer

Artesanal Investimentos | Apr 2022 - Apr 2023

- Designed and developed distributed, scalable microservices (Python - Flask) for web applications.
- Built and maintained front-end features (Angular/Typescript), ensuring seamless integration with backend services.
- Automated data workflows and business processes (Python - Selenium).
- Containerized microservices (Docker) to standardize environments and streamline deployments.
- Implemented and maintained CI/CD (Microsoft Azure) pipelines to accelerate delivery and improve release reliability.

PAULO CAVALCANTI

< SOFTWARE ENGINEER />

Software Engineer Intern

CESAR | May 2021 - Apr 2022

- Developed and maintained a WebApp (Python - Django) for governance management at big companies.
- Leveraged Celery to manage and schedule asynchronous tasks and cron jobs.
- Contributed across multiple SDLC phases, including requirements analysis, backend–frontend integration, implementation, testing, and client validation.
- Integration of environments and deployment through CI/CD pipelines.
- Mentored new interns during their onboard.
- Praised for commitment to project deliveries and inspiring other team members to do the same.

< EDUCATION HIGHLIGHTS />

Software Engineering Professional Postgraduate Degree

CESAR School | Apr 2024 - Sep 2025

- Field of research: Data analysis and engineering.
- Grade: 9.15

General English Standard 20 – English Immersion Program (C1 Advanced)

Stafford House International - Cambridge, UK | Nov 2023 - Dec 2023

Computer Science Bachelor

CESAR School | Aug 2019 - Jun 2023

- Machine learning class monitor (using Python with Pandas, NumPy, SKLearn and Keras).
- Mango project - Created an mobile app to help Pernambuco's country side farmers keep track of their crops.
- Lei.go - Project of a visual law startup to assist individuals with low educational levels in legal situations.
- Final paper: Analysis of Critical Points for Migrating from a Monolithic System to a Microservices Architecture Using the Strangler Pattern.

< SKILLS />

- PYTHON, FLASK, DJANGO, FASTAPI, PANDAS, POLARS, NUMPY, SQL, POSTGRES, ORACLE, MYSQL, NOSQL, REDIS, MONGODB, TYPESCRIPT, ANGULAR, NGINX, GUNICORN, DOCKER, LINUX, BASH, AWS, AZURE DEVOPS, TERRAFORM, GCP, KUBERNETES, DATA PIPELINES, DAGSTER, SQLMESH, RABBITMQ, FASTSTREAM, SELENIUM
